PHYSIK UNTER STOFFLICHEM GESICHTSPUNKT

Die Stoffeinteilung wird nach Metallen, Halbmatalen und Metalloiden, nichtmetallischen anorganischen und organischen Verbindungen durchgeführt. Bei den Elementen und deren Gemischen werden verwandte Stoffe zu Gruppen zusammengefaßt. Innerhalb der Stoffgruppen stehen Arbeiten über mehrere Stoffe voran. Dann folgt die Sortierung nach dem Periodensystem, Gemische bilden den Abschluß. Binäre Verbindungen sind nach den Halbmetall- bzw. Metalloidanionen geordnet, Verbindungen mit zusammengesetzten Anionen soweit wie möglich nach dem charakteristischen Element des Anions. Innerhalb einer Anionengruppe gilt für die Kationen die Stoffgruppensortierung der Elemente. Für organische Verbindungen wird die alphabetische Reihenfolge verwendet.
